

system view

Technical architecture

One deployable CRM, one shared data model, one evidence-grounded AI path.

Azure production platform

AI features

AI acts as an analyst beside the records: grounded, reviewable, and explicit about uncertainty.

ask the CRM

Questions across accounts, contacts, deals, cases, offers, activities and forecasts.
Persistent threads · file attachments

evidence-backed research

CRM snapshot + public web research.
Visible sources and uncertainty.

AI from any client

MCP lets compatible assistants search data and perform governed record actions.

structured insights

account enrichment

Company context and relevant account signals

next best action

Recommended follow-up with editable email draft

risk detection

Stale deals · overdue closes · SLA pressure · blockers

pipeline intelligence

Pipeline summaries and natural-language forecast narrative

[AI with receipts](#) Evidence + confidence + accept/dismiss review. No silent changes to stages, forecasts, approvals or customer data.
